

EUROSTRONOMIA 2017-2020

Building up a team on the project “Eurostronomia”
SUGS “Georgi Dimitrov” – Skopje, R. Macedonia

After first TPM in France teachers Marija Velevska and Jovan Janusheski have organised first meeting with students and teachers in SUGS Georgi Dimitrov – Skopje.

This is the first Erasmus project in our school and therefore the interest of the teachers was great. The coordinator introduced them to the project goals, the participants and some subsequent activities.

At the meeting with the students were presented the project goals, the partner schools, the planned activities and expectations from the students. We gave information about e-twinning, school web site and logo competition.

Also we explained that with this project the students will be allowed to recognize that Astronomy is the most interdisciplinary science, covering topics from physics to biology to chemistry, math to language to history. The project will improve the knowledge of astronomy for students of all ages and will give a contribution for lifelong hobby for students. We are going to promote cultural exchanges between European and non-European students. Team working in international groups will enhance communication skills and interpersonal skills

After the project we expect: to have benefit from working with colleagues from other countries, a lot of new studying materials for students, better communication skills and interpersonal skills and better cultural understanding.
