Interdisciplinary classes: astronomy in Geography

SUGS "Georgi Dimitrov" – Skopje, R. Macedonia

In September according our national education program student from first year had several classes in Geography with Astronomy as main subject of study. In coordination with physics teachers from our school and coordinator of the project Geography teacher had classes about:

The universe and the cosmic bodies, stars

Sun and Solar System

Planets and satellites, planetoids, comets, meteors

Moon

Determination, research for stars, sun, planets, satellites, meteors

Earth

Rotation on Earth

Revolution on Earth

Consequences of the Earth Revolution, heat belts

With these classes students should recognize that Astronomy is the most interdisciplinary science, covering topics from physics to Geography.
