The Size and Distance of the Planets

SUGS “GeorgiDimitrov” – Skopje, R. Macedonia

During May 2018, students worked on research and experimentation relating to “The Size and Distance of the Planets”. In this activity, they investigated the concept of relative size and distance by creating a basic model of our solar system. This activity helped to demonstrate the immense scale of the solar system. Students researched the size of the planets and their distances to the Sun. They then determined the correct proportion for a solar system model. The sizes of the planets vary greatly as do the distances between planets and the Sun.
